It is noted that in Ohio, Mr. Bryan got precisely the same vote this year that he did four years ago.

Mr. Eugene Smith, a New York lawyer, estimates the money cost of crime in this country at \$600,000.000 a year. This includes the cost of the machinery the criminal class make a necessary arm of government. Some criminal trials cost thousands of dollars. Besides the sums the criminal class get into their possession, the existence of this class calls for prisons, courts, police and like means of defense. Mr. Smith estimates the average yearly spoliation of the habitual criminal at \$1,100, and the numher of this class at one million and a quarter. If these estimates are correct, the criminal class costs the country \$400,000,000 a year besides the cost of punishing crime and protecting the omnunities against criminals. The one million and a quarter of criminals cost more than the federal government, more than twice as much as the army and navy, and more than is spent yearly in the United States for the public schools. Mr. Smith says the last year the city and county of New York spent \$20,000,-600 in repressing and correcting crime. During the same year the total expenses of the same district were \$90,000,000, Almost one-fourth of the total expenditure of county and municipal govern-ment was caused by the criminal class. THE WAY TO DO IT.

(From the Chicago Journal.) should inaugurate a campaign for the employment of convict labor on the universally abominable roads of the country. That is the easiest, cheapest, and best way to accomplish the purposes of the convention. Convicts should not be permitted to compete with free labor in the markets, nor should the state support them in idleness to its great financial loss and their intellectual, physical, and moral injury. If they were set to chal loss and their intellectual, physical, and moral injury. If they were set to work in chain gangs on the country work in chain gangs on the country successful husband, and she will be come a queen, and do nothing but look after her laundry, art, literature, kin, dry goods stores and dresamakers.

The butter men deny with scorn that there is any plan to form a creamery trust or that, in the nature of things, any such trust should be formed. They point out that the creamerles are too numerous to be bought up and consolidated. Then they show that the high price of creamery butter is probably due to the elemangarine makers, who are buying up the product and advancing prices in order to projudice the mind of the consumer and to create the impression that creamery butter is an article of luxury. obtainable only by the rich. Thus it appears that while the creameries are so numerous that nobody could buy them all it is quite feasible for somebody to buy all the butter. The end is plain. The malevolat eleomargarine men will go on buying butter and advancing the pirice until the people cannot stand the cheap substitute, 'bull butter.' But every cloud has a silver lining. By the time this is accomplished all the creamery men will be millienaires through seelling butter at exorbitant prices and the obsomargazine men will be bank. the elecmargarine men will be bank- ported.

MEMBERSHIP OF NEXT HOUSE.

[From the Chicago Times-Herald.] It is too much to expect, of course that congress would favor such a simple solution of the reapportionment prob-lem as the adoption of a round 200,000 as the ratio upon which to base the congressional representation for the next ten years. Under the new federal census that would make an increase only eighteen in the membership of the house, which is plenty large enough

The principal objection to this ratio however, would arise from the fact that it would reduce the representation of Maine, Virginia, Kansas and Nebraska. The opposition of these states would nothing if the house desired to establish the ratio at one representative for every 200,000 population, but there has always been such strong opposition to reapportionments which would entall He says the large Republican majority a loss upon any state that there is little given at the recent election was a surprobability that this congress will do prise to all, even to the Republican what it is generally conceded some future congress must do-cut down the representation of some of the states.

If precedents are followed, therefore, it is likely that congress will adopt the largest ratio possible without reducing the representation of any state, which is 194,344. This would add twenty-eight members, making the total membership of the house 385. It was plainly obvious as soon as the census returns from Illiforment could be made without adding to Illinois' representation in the house their reward for the way they voted in the increased price of corn. Uncle Mark Hanna stands by those who stand by being a gain of three. Only one other Hanna stands by those who stand by state in the union, New York, would secure so large a gain, which would give her thirty-seven representatives. READY DEC. 1. Bill For Reduction of the Revenue

Nearly Finished.

Washington, Nov. 22—The Republican members of the ways and means committee today decided to present the bill for the reduction of the revenue to the full committee on December 1, at 10 o'clock. The bill, however, probably will be prepared some time before that. Commissioner Wilson of the internal revenue bureau was before the commission for some time today giving information concerning the effect of the reduction of certain schodules and also as to the amount of revenue raised by the present law which it is proposed to reduce. Nearly Finished.

The committee has agreed upon a number of schedules to be reduced while on others there is a disagreement.
It is probable that a sub-committee soon will be appointed to make a final

draft of the measure.
